

Atari-File-Finder

Release 1.4 en

Overview

The Atari-File-Finder searches through all disk images for 8-Bit-Atari-emulators, contained in a selected PC directory and its subdirectories, for specified Atari files.

The Atari-File-Finder recognizes and handles disk images in both XFD format and ATR format. The Atari disk directories can be readed for all popular DOS2 compatible disk managements of the 8-Bit-Atari series (DOS2.0, DOS2.5, Happy-Dos, Bibo-Dos, Turbo-Dos and MyDos).

Directories of other DOS (i.a. Sparta-Dos and Bewe-Dos) can't be opened!

Search though Atari image files

The items for file find are available in the menu **tools** and in the toolbox.

Input the search string of asked files in the find mask. The search term may contain one or more **[*]** characters in the name and/or the extension of file. The character **[?]** is not allowed as wildcard.

If hits are found or images was not readed (e.g. Sparta DOS), the items for display of results will be enabled.

All functions of the menu **Tools** are also on the [toolbar](#).

Menu Help

Content: This help file will be opened.

The result text in the header contains the search term, the number of processed images and the number of hits.

It follows the hit list of Atari files with their location specification
(disk image: directory> file name).

These entries are grouped by pc directories.

If DOS2 incompatible disk images was skip or images couldn't be loaded in another way, their names will be listed at the end.
